Rocky Research Awarded Phase II SBIR for Universal Modular Electronics Cooler

Boulder City, NV - Huntsville, AL (May 19, 2010) - Rocky Research, a leader in thermal and energy management solutions and provider of commercial, industrial, and military products has been awarded a \$728,000 Phase II SBIR for a Universal Modular Electronics Cooler by CECOM.

The development of a Universal Modular Electronics Cooler (UMEC) for the Army is applicable to cooling of high density electronics components used in Signals Intelligence and Electronics Warfare. Rocky Research holds numerous patents related to thermal management technologies including variable speed controls and complex compound sorption technology supporting a broad range of markets from commercial HVAC to military applications. "The Universal Modular Electronics Cooler has potential use for a wide range of electronics cooling applications in both the military and commercial markets" stated Paul Sarkisian Rocky Research's Director of Engineering. "This cooling system could be used for sealed electronics cases or for add-on cooling of open cases. Some applications in the commercial market may be cooling for banks of high end workstations, use in data centers, mainframe computers and cell phone sites with radio and power electronics" indicated Sarkisian.

About Rocky Research

Rocky Research has a long history of solving thermal problems across an incredibly broad range of commercial, industrial, and defense applications. With facilities in Boulder City, Nevada, and Huntsville, Alabama, Rocky Research is home to a dedicated group of scientists, engineers, technicians and support personnel. The Boulder City facility offers prototype development, testing and analytical services. The Huntsville facility offers prototype assembly as well as production and integration of commercial, industrial, or military high-density electronic systems utilizing Rocky Research's advanced thermal management approaches and devices.
